Installation Pricing Guide

WHAT DISTINGUISHES M.J.'s SERVICES?

Our Superb Installation Process

SOIL PREP

A proper foundation is necessary for a home as it is for new and existing landscape beds. Roots grow in the top 8-12" of soil. Loose and fertile soil is a must for proper root development and plant growth.

DEEP DIGGING

We dig down a minimum of 18" to break up compacted soils and allow for better drainage.

ADDITIONAL ORGANIC MATTER

During our bed preparation, we add 3-4" of organic compost. After the compost is tilled in, topsoil is added to achieve the desired bed elevation. Plants can then be installed in fertile soil.

\$100,000+
